

SHOREMAX™

Flexible Revetment Mat

Flexible revetment solution, for permanent vegetation reinforcement.

When protecting shorelines, transition zones, or areas subject to wave action, ShoreMax provides the robust protection of hard armor with the benefits of a living system.

This transition mat is specifically engineered to resist hydraulic uplift and scour while facilitating permanent, deep-rooted vegetation.

ShoreMax is the ideal choice for managing the energy of near-shore environments while maintaining a vegetated solution.

General Details:

- Flexible mat that easily installs over difficult topography
- Non-buoyant design prevents floating or uplift in submerged conditions.
- Available in a 3 x 5 foot panel, with apertures allowing vegetation growth through.
- Requires no heavy equipment for installation.
- Safer for pedestrian and vehicle traffic than hard armor materials along roads and drainage areas.
